#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

This Office Action is in response to the amendment filed on 3/14/06. No claims have been amended, added, or canceled.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee (U.S. Pat. No. 6,182,979).

With respect to claim 1, Lee discloses a suspension for a vehicle having a body having a roll center (RC2). A first suspension assembly extends between a first wheel assembly and the body (Figure 2), wherein the first suspension assembly defines an instant center (C2, Figure 4). A second suspension assembly inherently extends between a second wheel assembly and the body, wherein the second suspension assembly defines an instant center. The first wheel assembly and the second wheel assembly are inherently aligned so that a vertical centerline of each wheel assembly lies within a vertical plane that extends therebetween, and the instant center (C2) of each wheel assembly suspension is located within the vertical plane, below the roll center (RC2) located within the vertical plane (Figure 4).

With respect to claim 2, a first control arm (38) extends between a wheel assembly and the body, wherein the first control arm defines a first suspension plane (Figure 4). A second control arm (40) extends between the wheel assembly and the body, wherein the second control arm defines a second suspension plane (Figure 4). An intersection between the vertical plane and the first suspension defines a first line, and an intersection between the vertical plane and the second suspension plane defines a second line, where the first and second lines intersect at an instant center (C2) which lies below a roll center (RC2) of the vehicle. The first control arm and

Art Unit: 3616

the second control arm do not cross one another when the first wheel assembly is viewed from one of a front and rear of the vehicle (Figure 2).

With respect to claim 3, the first (38) and second (40) arms have two degrees of restriction and are rotatably fixed between the wheel assembly and the body (Figure 1). The first arm is shorter than the second arm (Figure 2).

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***
